Skills

Backend technologies

-  Go (Fiber)
-  Python (FastApi)
-  JavaScript (Express)
-  Ruby (Rails)

Frontend technologies

-  HTML, Css and JS
-  JavaScript (VueJS, ReactJS)

DevOps technologies

-  Kubernetes
-  Docker and Docker Compose
-  Github Actions

AI technologies

-  Claude Skills and MCP
-  Ollama and llama.cpp

Soft Skills

-  Leadership
-  Communication
-  Planning
-  Agile methodologies (Scrum)

Profile

I'm an experienced Senior Developer with extensive experience working in the Web and AI world. Working with new technologies and creating scalable and efficient solutions is my passion. I really love learning new technologies and testing new tools, which gives me hands-on experience with the most popular tech tools like AI, ML, DevOps, and Cloud.

Profesional Experience

Senior Software Engineer

Mercado Libre (November 2025 - Present)

I am creating scalable systems for CI and CD across all Mercado Libre Internal and public applications (more than 80k), connecting advanced AI systems for Security Checks and Code Quality, and working with the latest AI tools (MCP, RAG, skills) to improve the Release Process System for Mercado Libre.

Senior Backend and Devops Developer

Helios & partners (November 2024 - November 2025)

I led a team of 7 engineers to build Advanced Financial AI models over the mathematical theory of Investment using real-time stock movements to do high-frequency algorithmic trading, designing and building since the real-time software architecture based on event-driven and DDD architectures to the infrastructure and cluster schema over Kubernetes

Artificial Intelligence QA Developer

Revelo (April 2024 - November 2024)

I worked in the training of different LMMs focused on code generation with a variety of programming languages. As a QA developer, my the main responsibility is to build a fine tuning over the models to adjust the generated code and explanation based on good practices and standards.

Full-Stack Developer

Fusepong (Sep 2021 - April 2024)

I was making a powerful access control software with a great team as full-stack developer using PostgreSQL and Rails in the backend and, VueJS with Cordova in frontend. Additionally, we use Docker with different frameworks, usually from Python for create operative systems in micro-controllers and microservices connected with CI/CD in Kubernetes with Github Actions. All focused on create an integrated ecosystem of innovation in the Latam security.

Web Developer

Freelance (Jul 2019 - Sep 2021)

Worked on a lot of independent or personal projects with MERN stack (MoogoDB, Express, ReactJS, Node), using in some cases Handlebars like template motor (for fast projects without a big frontend requirement).

Education

Electronic Engineering

UNAD (Universidad Nacional Abierta y a Distancia)
2021 - Present

I'm studying Electronic Engineering, I've learned C, C++ and VHDL focused in the implementation of micro-controllers and micro-processors, also I'm learning the process to design intermediate level integrated circuits for build simple electronic machines by myself.

Technical Degree in Software Development

SENA (Servicio Nacional de Aprendizaje)
2019 - 2021

Basis of software development from logic to advance algorism and OOP are concepts that I learned in this institute, coding in Java and PHP and building personal web apps.
